 - Basic understanding of modern software design and development methodologies
-

PROJECTS

Flooring Application

Business application that reads and writes information orders for a flooring company. Focuses on n-tier architecture that encompasses the use of a service layer and interfaces. It follows the MVC pattern and incorporates Spring Dependency Injection and Spring aspect-oriented programming.

Vending Machine

Spring MVC Web Application that models after a vending machine. This app uses HTML and CSS to match the functionality of Spring MVC Framework in the backend. Displays error messages if user fails to insert enough money or if the item selected is sold out.

Superhero Sightings

Full Stack Spring MVC RESTful Web Application. This app allows users to create sightings based on where superheroes were seen, and locations the sightings occurred. App incorporates data from database using MySQL scripts. Program also integrates HTML, CSS, JSPs, Spring Jdbc Templates, and Spring Security. Security feature allows certain privileges based on roles.

WORK EXPERIENCE

TALKHIRING

Software Developer Intern

- Completing research to understand new application ideas and features for mock interviewing tool
- Working within stack as well as learning Node.js, React.js, and PostgreSQL to build out features
- Participating in code reviews to ensure code quality and distribute knowledge
- Assisting with the testing of newer features and implementations into the codebase

Scholar Stem

Tech Instructor

- Leading and teaching classroom of students how to design and build software and hardware
- Assisting with curriculum development that will be implemented as company standard
- Collaboration with other staff members (e.g., school personnel) and external STEM professionals
